PART NUMBER	DESCRIPTION
	12-Volt PowerPulse Unit is powered by battery's own energy rather than solar power. Collects battery's energy, reconditions it, and returns it as pulsating dc current to remove sulfates from the plates, which re-energizes and removes lead sulfate deposits from plates.
	24-Volt PowerPulse This patented device is weatherproof and easy to install. Like Solargizer, it uses pulse technology to eliminate sulfation buildup on battery plates. The difference is that this unit is powered by the battery's own energy rather than solar power.
	34-Volt PowerPulse IDEAL FOR MOTIVE EQUIPMENT. Keeps deposits from building up on frequently-charged 36-volt battery systems like forklifts and golf carts.
	48-Volt PowerPulse IDEAL FOR MOTIVE EQUIPMENT. Get maximum run time on forklifts, golf carts and other frequently-charged 48-volt battery systems.
